Final-year CS student and AI/ML intern building LLM systems that have to be **measurably right**, plus the production backends around them. I pick up whatever stack the problem needs, and I publish the calibration when the demo score was circular.

EXPERIENCE

Kwilo AI · AI/ML Intern · Bengaluru — Apr–May 2026, Jul 2026–present

- Built a **vision-LLM benchmarking pipeline** grading scanned scripts per subpart vs teacher marks (4 subjects, 11 cells). Few-shot cut GPT error **28% (MAE 1.259 → 0.910)**; best pipeline **0.855 MAE, zero failures** — set the production model.
- Shipped **answer-sheet auto-mapping** (filename, then Gemini OCR) that never blocks uploads; public **blog platform** end to end; school ERP with **race-safe fee settlement** and admissions that confirm before linking parent accounts (Postgres RLS, tests on every change).

Goloka IT · Backend Development Intern · Remote — Dec 2025–Mar 2026

- Built REST APIs for an e-commerce platform in **Java Spring Boot** across Agile sprints, improving response times by **25–35%**; added auth workflows and rate limiting, deployed through CI/CD to AWS EC2.

REINFOSEC · Cybersecurity Intern · Bengaluru — Jul–Aug 2025

- Solved **100+ CTF challenges** (TryHackMe, PortSwigger, picoCTF, Natas) covering recon, web exploitation and password attacks with nmap, Burp Suite, sqlmap and hydra.

PROJECTS

PayRecover-Jev · failed-payment diagnosis, second build — github.com/Nish344/payrecover-jev

- v1 put Gemini behind a policy gate and recovered **31.3% of failed value** on 80 seeded cases. The demo score was circular, so Jev is a typed model on a held-out bench (n=166): **ECE 0.059** vs Gemini 0.189, zero high-confidence errors on ambiguous cases. Accuracy intervals overlap, so calibration is the published result.

open-aiops · Intervues Club open source · Apache-2.0 — github.com/SupriyankaKharade/open-aiops

- Own **governance/**: LLM provider router ranked by cost, latency and overload; failover on rate limits and timeouts; retry with exponential backoff and full jitter. Merged public PRs with fake-provider tests (no API keys in CI).

Dhātrī · Serverpod hackathon · AI care companion — github.com/Nish344/Dhatri

- Flutter + Serverpod care loop for elders: prescription photo → Gemini draft → human confirm → Future Call reminders → live caregiver alerts → Hindi voice check-ins (Sarvam) with **pgvector** patient memory. AI drafts; humans confirm.

Paylock · invoice gate, with Nikhil — github.com/Nish344/paylock

- The model may say PAY. The button pays only if the purchase order and the receiving note agree. **8/8** expected verdicts on a synthetic bench, including two where Decide said PAY at 100% and the ledger held (one total was $91 high).

SKILLS

ai / ml	vision LLMs, few-shot prompting, eval harnesses, calibration, RAG, LangGraph, Jev, Clocked, provider failover / retry, PyTorch, Whisper / SSL, Sarvam STT/TTS
llm platforms	Gemini (Vertex AI), Azure OpenAI, AWS Bedrock, Claude
backend	FastAPI, Serverpod, Flask, Spring Boot, SQLAlchemy async, Alembic, PostgreSQL (RLS, pgvector), pytest
frontend / cloud	React, TypeScript, Flutter, Next.js, React Native; Docker, GCP Cloud Run, AWS EC2/S3, CI/CD
languages	Python, Dart, Java, TypeScript, SQL, C, Bash · security: OWASP Top 10, Burp Suite, nmap

EDUCATION

Bangalore Institute of Technology — 2023–2027
B.E. Computer Science · **CGPA 8.50**
specialisation: IoT, Cybersecurity & Blockchain

CERTIFICATIONS

OCI Generative AI Professional (2025) · OCI AI Foundations Associate · APIsec Certified Practitioner

ACHIEVEMENTS

- **1st place**, Turing Much (college ML competition)
- **3rd place**, BuzzOnEarth 2024, IIT Kanpur · 10+ hackathons
- **290** LeetCode problems · **top 2%** on TryHackMe
